## Storage Multipathing Leave a comment

### Common EMC Power Path Polcies

```
powermt set policy=li|lb|rr|re [class=symm|clariion|ess|hitachi|hpxp|invista|all] [dev=device|all]
```

```
powermt set policy=si [dev=device|all]
```

```
powermt set policy=so [dev=device|all]
```

```
powermt set policy=co [dev=device|all]
```

```
powermt set policy=ad
```

```
# powermt set mode=standby adapter=<adapter#>
```

To enable a HBA from passing I/O

```
# powermt set mode=active adapter=<adapter#>
```

To set or validate the Load balancing policy

To see the current load-balancing policy and I/Os run the following command

```
# powermt display dev=<device>
```

- 

so = Symmetrix Optimization (default)

- 

co = Clariion Optimization

- 

li = Least I/Os (queued)

- 

lb = Least Blocks (queued)

- 

rr = Round Robin (one path after another)

- 

re = Request (failover only)

- 

nr = No Redirect (no load-balancing or failover)To set to no load balancing

```
# powermt set policy=nr dev=<device>
```

To set the policy to default Symmetrix Optimization

```
# powermt set policy=so dev=<device>
```

To set the policy to default Clariion Optimization

```
# powermt set policy=co dev=<device>
```
